

The schematic diagram illustrates the power supply section of the TI-99/4A. It features a transformer (T1) with primary pins 1, 2, and 3 connected to GND, VBAT_RAW, and VBAT_F respectively. The secondary has pins 1, 2, and 3 connected to GND, VBAT_F, and GND. A bridge rectifier (D1) is connected to the secondary. The output of the rectifier is connected to a filter capacitor (C15) and a voltage divider (C1) to ground. The output is labeled VSW and is connected to a 100uF hybrid 35V capacitor. The input is labeled XT60_BATT and the output is labeled 15A 470.

Figure 10 shows four circuit diagrams labeled J1, J2, J3, and J4, representing different fault injection points for the VES2557. Each diagram includes a yellow block labeled 'VES2557 2.5A' with various input and output pins. The diagrams show the internal connections and the fault injection points for each configuration.

- J1:** Shows a fault injection point at the EN pin. The circuit includes a 5V supply, a 10k resistor, and a 220pF capacitor. The output is connected to a 2x4 LED matrix (2x32).
- J2:** Shows a fault injection point at the ILIM pin. The circuit includes a 5V supply, a 10k resistor, and a 220pF capacitor. The output is connected to a 2x4 LED matrix (2x32).
- J3:** Shows a fault injection point at the ILIM pin. The circuit includes a 5V supply, a 10k resistor, and a 220pF capacitor. The output is connected to a 2x4 LED matrix (2x32).
- J4:** Shows a fault injection point at the ILIM pin. The circuit includes a 5V supply, a 10k resistor, and a 220pF capacitor. The output is connected to a 2x4 LED matrix (2x32).
